ANNEXED NOTE

1. Technical Notes and Definitions

Saudi census 2022:

Date of reference: 10 May 2022

Population of reference: Families and individual citizens and residents within the Kingdom, regardless of the status of their identification documents.

Visitors for Hajj, Umrah and tourism are excluded from the census.

Methodology: The first phase of the 2020 census began on 3 February 2020 (enumeration of buildings and households). Census 2022 used geospatial data, including satellite images, electricity consumption and mobile phone data, to improve the accuracy and geographic coverage of address canvassing.

The 2022 census used a combined methodology – administrative records, fieldwork and digital self-enumeration.

Household data were collected from e-portals of self-enumeration (on residents' mobile devices, laptops or personal computers, or self-enumeration stations/kiosks, located in shopping centers).

The digital self-enumeration process was complemented by face-to-face interviews, using digital tablets.

Census 2022 used a de jure approach: enumerating people according to their usual place of residence.

Administrative data from multiple sources was used to cross-validate collected census data.

Indicator's Definition: Estimated Saudi births in the 12 months preceding population reference date, in absolute numbers, with breakdown by mothers'

age from 2011 to 2022.

See census methodology in:

<https://portal.saudicensus.sa/portal/public/methodology>

Portal of the Saudi census:

<https://portal.saudicensus.sa/portal>

Population data for 2010-22 were revised and backcasted, based on 2022 population census and past years' administrative data.

Technical note on backcasting:

https://database.stats.gov.sa/Methodologies/En_Documents/40_Technical%20Note%20Population%20Back%20Casting.PDF

Data for non-Saudis are not published:

"Given regulatory framework which restricts Non Saudis from staying after the working age period, only Saudi figures are published"

See: "other info" in metadata.
